Wireframe

Sprint Review:

Sprint Goals

In this sprint, the goal is to create a plan on how the product looks like and establish some sprint backlogs that will make it easier to implement the next sprint. During this sprint, we visualized on what website to create and learned the process on how to implement it. Also, in the process of making the website, we created a sitemap and wireframe to better imagine how the website will come out and the features it has; these are the goals that we envisioned for this project.

Product Overview

The concept behind this website, is to create an online donation board for strays, where the donations will be used to properly sustain the needs and care that the strays will need in their everyday lives. Also, as this is an online platform, individuals who has plans to donate can easily access the website.

Status Overview

A sitemap and a wireframe for the website has already been established at the end of the sprint. The sprint backlogs are also done, which can be used as a reference for future continuation of the sprint.

Impediments

Time management has been mostly the problem in the realization of this project. Distractions and other responsibilities hinder the team to fully commit their time to the project.

Feedback

As of this moment, no negative concerns have been raised and as such, the project will continue to be developed until such time the project is officially finished.

Sprint Retrospective:

What went well?

- Successful implementation of the sitemap and the wireframe.
- Established goals and vision on how the website will look like.
- Established the main purpose of the website.

What to improve?

- Time management is the most important factor to improve.

Actions to take.

- Allocate enough time for other responsibilities before fully committing on the project.
